# AMIFrax

AMIFrax is the next generation platform for data van software, offering flexible data viewing for on-site supervisors and engineers. Create a custom screen for each person to view the information that is important them.

Features

DATA VIEWING
Provides access to the raw data logged during the frac job.

CONFIGURABLE, MULTI-SCREEN LAYOUTS
Allows you to customize and adjust screen layouts and channel display.

WELL BORE DIAGRAM
Provides a detailed view of the well bore, giving a visual indication of when proppant reaches the perforation

GRAPHING
Capture annotations and screenshots of channel data.

INTEGRATES WITH DVCOMMAND
Collects information, which is centralized at the data van.

SERIAL DATA COMPATIBLE
Supported data input via serial stream.

CSV JOB DATA
Allows you to set parameters for logging channel data to .csv files.

SERVICE AND SUPPORT
Dedicated customer service from commissioning, training, and implementation through to field support.
